

Beads Bowl

(Taken from happinessishomemade.net)

You will need:

- An oven proof bowl
- Small colourful plastic beads
- Cooking spray (or lightly grease the bowl with a tissue soaked in cooking oil)
- Preheated oven 375°F/190°C.

Coat the inside of your oven proof bowl with the cooking spray/oil and pour a handful of beads into the bowl so that there is just a single layer of beads in the bowl. The cooking spray will help the unmelted beads temporarily stick to the walls of the bowl in order to build it up and make it taller.

Place your bowl on a baking sheet and into your oven. After about 5 minutes you'll see the beads start to stretch out and begin to melt.

After 15-20 minutes the bowl will be fully melted and can be removed from the oven. ***Please, be careful*** because the bowl will remain hot for quite a while after it's removed from the oven! At this point while the melty beads are still flexible, you can use the back of a spoon to gently push the softened beads around and fill in any large holes or gaps.

Allow to cool for 20-30 minutes before removing the bead bowl from the outer bowl! Give the outside of your bead bowl a light wiping with a soapy sponge to remove any cooking spray residue.
