

# REPTILES - TURTLES

By: Carmen Vega de Seoane

# REPTILES - TURTLES

- ❖ Turtles are reptiles with **hard shells** that protect them from predators.
- ❖ They are among the **oldest** and most primitive groups of reptiles
- ❖ Turtles spend most of their lives in **water**. They are adapted for aquatic life.

❖ Tortoises are land animals.

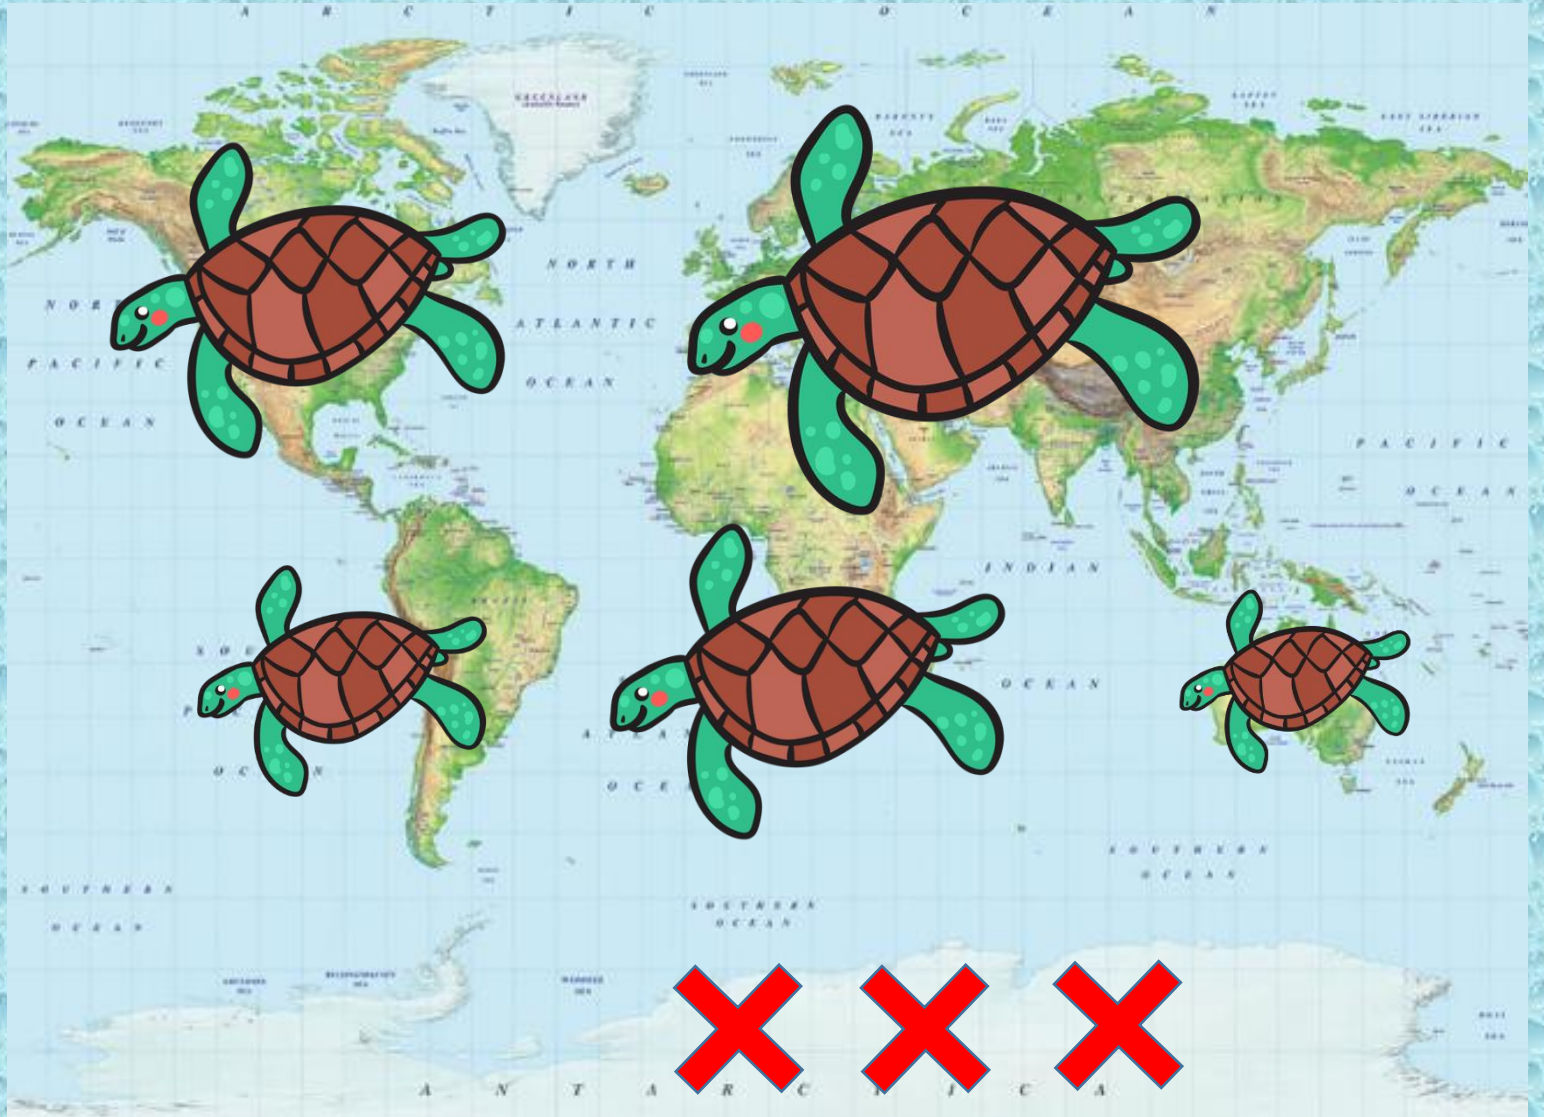

❖ **Size:** With so many different types of turtle, there is no average size.

❖ **Habitat:** Turtles are very adaptive and can be found on every continent, except Antarctica.

❖ **Habits:** Turtles are not social creatures. They don't interact.

❖ **Diet:** Most turtles are omnivores; they eat a variety of different things, depending on their species.

❖ All turtles lay **eggs**. They find a place on land to lay their eggs, dig a nest into the sand or dirt and then walk away.

❖ **Shell:** the turtle's shell is an adaptation that protects it from predators, which compensates for the reptile's slow crawling speed.

**THANK'S  
FOR YOUR  
ATTENTION!!**
